SUMMARY

Autonomous, driven and focused on problem solving I will challenge your needs and we will design in close collaboration the most suitable solution for your business or project. For me writing code is a craft and the developer a craftsman. This is why writing code that is clean, reviewed, maintainable and following professional best practices to guaranty quality is a major focal point. As a perpetual student learning new skills is not frightening to me.

Experience

May 2024 – *present*

Freelance Developer
